

# The `l3charts` package

Éric BURGHARD

2022/07/15

<https://git.itsufficient.me/latex/l3charts>

---

## Abstract

This package defines a few simple `TikZ` charts that can be drawn using `LATEX` environments. This has mainly been developed as an experimentation of `expl3` for checking what `LATEX`3 really brought to facilitate package development (expansion control, `clist`, `seq`, `prop`, ...).

# 1 About this documentation

I doubt that  $\text{\LaTeX}$  will have one day a modern documentation system as powerful as **cargo doc** due to its typeless and syntaxless nature. In my opinion  $\text{\LaTeX}$  literate programming with **docstrip** is just an ugly hack that turns the code and the documentation unmaintainable, and it's probably the component of  $\text{\LaTeX}$  which aged the most.

So I chose to write the documentation separately and borrowed much of the style from the **microtype** package which by the way, pushes the **docstrip** mastery to a *black magic* level.

## 2 Kiviat chart

### 2.1 Usage

The **kiviat chart** or *radar chart* allows to represent one or several set along several dimensions.

`\begin{kiviatchart}` Environment that hold a kiviat chart. Accepts an optional argument [*<clist>*] which is comma separated list of keywords and values :

<code>\end{kiviatchart}</code>		
<b>radius</b>	<i>&lt;dim&gt;</i>	3.5cm
	Maximal diagram radius	
<b>label-radius</b>	<i>&lt;dim&gt;</i>	3.5cm
	Radius to put dimension labels on	
<b>units</b>	<i>&lt;int&gt;</i>	5
	Set the scale of units from 0 to the given number	
<b>*</b>	<i>&lt;keyval&gt;</i>	
	All other options are passed to <code>tikzpicture (env)</code>	
	A <code>kiviatchart (env)</code> should begin with a <code>dims (env)</code> , followed by one or several <code>set (env)</code> .	

#### 2.1.1 Dimensions

<code>\begin{dims}</code>	Environment that hold the definition of all dimensions. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list of keywords and values :	
<code>\end{dims}</code>		
<b>dim-options</b>	<i>&lt;prop&gt;</i>	{opacity=0.8}
	TikZ options for drawing dimensions axis with	
<b>unit-options</b>	<i>&lt;prop&gt;</i>	{opacity=0.3}
	TikZ options for drawing unit polygons with	
<b>label-options</b>	<i>&lt;prop&gt;</i>	{opacity=0.5,below}
	TikZ options drawing for unit labels	
<b>label-cs</b>	<i>&lt;str&gt;</i>	identity
	Name of the cs used to format labels	
<b>unit-cs</b>	<i>&lt;str&gt;</i>	tinytt
	Name of the cs used to format unit scale	
<b>\tinytt</b>	Macro used to format unit labels	
	<code>\cs_new:Npn \tinytt #1 {\texttt{\tiny #1}}</code>	
<b>\value</b>	<code>\value[&lt;clist&gt;]{&lt;label&gt;}</code> is used to add a dimension to the kiviat chart. [ <i>&lt;clist&gt;</i> ] is passed to TikZ to draw the nodes corresponding to the labels.	

#### 2.1.2 Set

`\begin{set}` `set (env)` is used to add a new set to the kiviat chart. Accepts an optional argument [*<clist>*] which is comma separated list of keywords and values :

`\end{set}`

- dot-options**  $\langle prop \rangle$  {fill,circle,inner sep=1pt}  
Options for polygon node
- \***  $\langle keyval \rangle$  color=black,line width=1.5pt,opacity=1,fill opacity=0.3,fill=gray  
All other options are passed to `\draw cs` which draws the polygon
- \value** `\value{ $\langle int \rangle$ }` is used to add a value to the set.  
There must be the same number of `\value` inside `set (env)` and `dims (env)`, and each `\value` corresponds to the dimension in `dims (env)` at the same index.

## 2.2 Examples

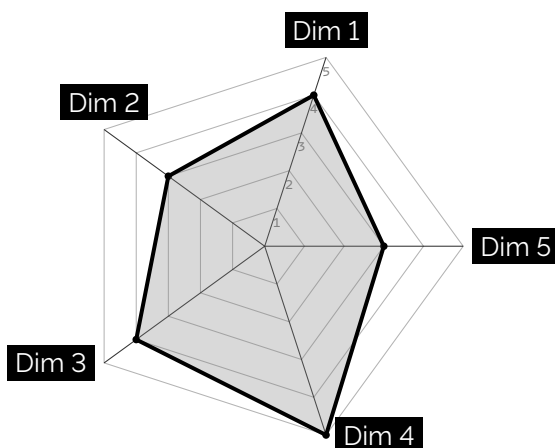

### 2.2.1 Simple

Use **label-cs** to call `\textinv` to format the labels.

**\textinv** Macro used to format labels

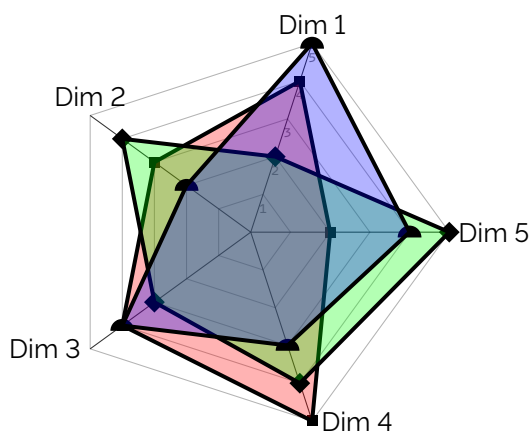

*% white text on black background*

`\NewDocumentCommand\textinv{m}{\colorbox{black}{\textcolor{white}{#1}}}`

```
% scale is passed to tikzpicture
\begin{kiviatchart}[scale=0.75]
  % Define all the dimensions
  \begin{dims}[label-cs=textinv]
    % Specify placement of each
    % labels
    \value[above]{Dim 1}
    \value[above]{Dim 2}
    \value[left]{Dim 3}
    \value[right]{Dim 4}
    \value[right]{Dim 5}
  \end{dims}
  % Add one or several sets.
  % Each value corresponds to
  % the dimension at the same
  % index in dims
  \begin{set}
    \value{4}
    \value{3}
    \value{4}
    \value{5}
    \value{3}
  \end{set}
\end{kiviatchart}
```

### 2.2.2 Multi-set

```
% scale is passed to tikzpicture
\begin{kiviatchart}[scale=0.75]
  \begin{dims}
    \value[above]{Dim 1}
    \value[above]{Dim 2}
    \value[left]{Dim 3}
    \value[right]{Dim 4}
    \value[right]{Dim 5}
  \end{dims}
  % Fill this set in red
  % with rectangle dots
  \begin{set}[
    fill=red,
    dot-options={
      fill,rectangle,
      inner sep=2pt
    }
  ]
    \value{4}
    \value{3}
    \value{4}
    \value{5}
    \value{2}
  \end{set}
  % Fill this set in green
  % with diamond dots
  \begin{set}[
    fill=green,
    dot-options={
      fill,diamond,
      inner sep=2pt
    }
  ]
    \value{2}
    \value{4}
    \value{3}
    \value{4}
    \value{5}
  \end{set}
  % Fill this set in blue
  % with semicircle dots
  \begin{set}[
    fill=blue,
    dot-options={
      fill,semicircle,
      inner sep=2pt
    }
  ]
    \value{5}
    \value{2}
    \value{4}
    \value{3}
    \value{4}
  \end{set}
\end{kiviatchart}
```

## 2.3 To do

At the moment the environments are not user friendly. We could provide basic sanity checks, with error messages when these rules are violated :

- one and only one `dims (env)` declared before any `set (env)`
- all `set (env)` have the same number of `\value` than the `dims (env)`
- `\value` in `set (env)` is between 0 and **units**

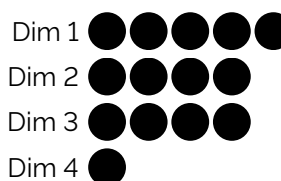

## 3 Ball chart

### 3.1 Usage

<code>\begin{ballchart}</code>	Environment that hold a ball chart. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list of keywords and values :		
<code>\end{ballchart}</code>			
<b>n</b>	<i>&lt;int&gt;</i>	5	The number of circles
<b>v-sep</b>	<i>&lt;fp&gt;</i>	0.1	Vertical separator in <i>cm</i>
<b>h-sep</b>	<i>&lt;fp&gt;</i>	0.5	Horizontal separator (circle) in <i>cm</i>
<b>radius</b>	<i>&lt;fp&gt;</i>	0.25	Radius of the circles in <i>cm</i>
<b>gap</b>	<i>&lt;fp&gt;</i>	0.05	Gap between circle in <i>cm</i>
<b>label-cs</b>	<i>&lt;str&gt;</i>	identity	Macro name to format labels
<b>fill-options</b>	<i>&lt;prop&gt;</i>	{fill=black}	TikZ options to fill balls with
<b>draw-options</b>	<i>&lt;prop&gt;</i>	{draw=black!30}	TikZ options to draw balls with
<b>label-options</b>	<i>&lt;prop&gt;</i>	{left}	TikZ options for dimensions axis
<b>*</b>	<i>&lt;keyval&gt;</i>	All other options are passed to <code>tikzpicture</code> ( <i>env</i> )	
<b>\value</b>	<code>\value{&lt;label&gt;}{&lt;percent&gt;}</code> is used to add a new bar.		

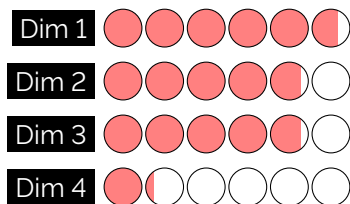

### 3.2 Examples

#### 3.2.1 Simple

```
% 5 circles bar, hide the circles
\begin{ballchart}[
  draw-options={draw=none}]
  \value{Dim 1}{95}
  \value{Dim 2}{80}
  \value{Dim 3}{80}
  \value{Dim 4}{20}
\end{ballchart}
```

### 3.2.2 Delimited

```
% 6 circles bar, format the labels,
% fill in red, and shows circles
\begin{ballchart}[
  n=6,
  label-cs=textinv,
  v-sep=0.2,
  fill-options={fill=red!50},
  draw-options={draw=black}]
\value{Dim 1}{95}
\value{Dim 2}{80}
\value{Dim 3}{80}
\value{Dim 4}{20}
\end{ballchart}
```

## 4 Bar chart

### 4.1 Usage

<code>\begin{barchart}</code>	Environment that hold a bar chart. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list of keywords and values :	
<code>\end{barchart}</code>		
<b>width</b>	<i>&lt;fp&gt;</i>	3
	Maximum width in <i>cm</i>	
<b>height</b>	<i>&lt;fp&gt;</i>	0.35
	Bar height in <i>cm</i>	
<b>gap</b>	<i>&lt;fp&gt;</i>	0.25
	Gap in <i>cm</i>	
<b>fill-options</b>	<i>&lt;prop&gt;</i>	{fill=black}
	TikZ options to fill the bar with	
<b>draw-options</b>	<i>&lt;prop&gt;</i>	{draw=black!20}
	TikZ options to draw the bar with	
<b>label-cs</b>	<i>&lt;prop&gt;</i>	identity
	Macro name to format labels	
<b>*</b>	<i>&lt;keyval&gt;</i>	
	All other options are passed to <code>tikzpicture</code> ( <i>env</i> )	
<b>\value</b>	<code>\value{&lt;label&gt;}{&lt;percent&gt;}</code> is used to add a new bar.	

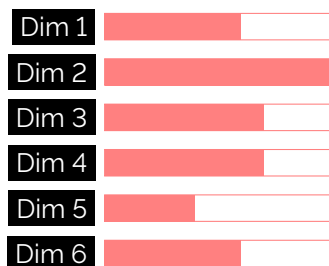

### 4.2 Examples

#### 4.2.1 Simple

```
% hide borders
\begin{barchart}[
  draw-options={draw=none}]
\value{Dim 1}{60}
\value{Dim 2}{100}
\value{Dim 3}{70}
\value{Dim 4}{70}
\value{Dim 5}{40}
\value{Dim 6}{60}
\end{barchart}
```

### 4.2.2 Delimited

```
% 3cm wide bars, format labels,
% fill in red and show borders
\begin{barchart}[
  width=3,
  label-cs=textinv,
  fill-options={fill=red!50},
  draw-options={draw=red!50}]
\value{Dim 1}{60}
\value{Dim 2}{100}
\value{Dim 3}{70}
\value{Dim 4}{70}
\value{Dim 5}{40}
\value{Dim 6}{60}
\end{barchart}
```

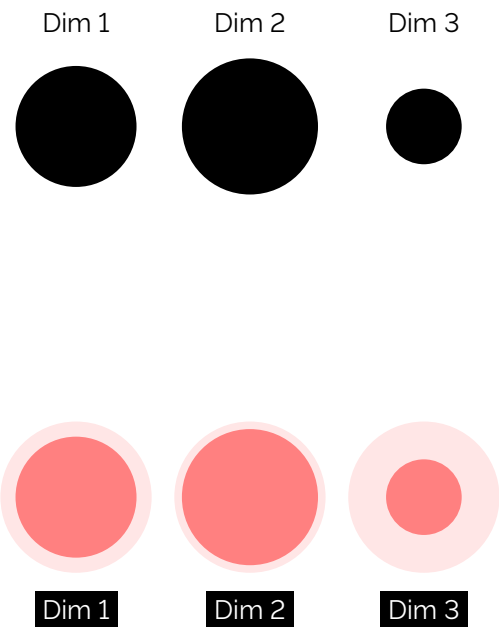

## 5 Bubble chart

### 5.1 Usage

<code>\begin{bubblechart}</code>	Environment that hold a bubble chart. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list of keywords and values :		
<code>\end{bubblechart}</code>			
<b>radius</b>	<i>&lt;fp&gt;</i>		1
	Max radius in <i>cm</i>		
<b>gap</b>	<i>&lt;fp&gt;</i>		0.3
	Gap between bubbles in <i>cm</i>		
<b>fill-options</b>	<i>&lt;prop&gt;</i>	{fill=none,draw=black!30}	
	TikZ options to fill/draw the background with		
<b>draw-options</b>	<i>&lt;prop&gt;</i>	{fill=black,draw=none}	
	TikZ options to fill/draw the bubble with		
<b>label-cs</b>	<i>&lt;str&gt;</i>		identity
	Macro name to format labels		
<b>label-pos</b>	<i>&lt;str&gt;</i>		above
	Position of the label		
<b>vertical</b>	<i>&lt;bool&gt;</i>		false
	Stack the bubble vertically instead of horizontally		
<b>*</b>	<i>&lt;keyval&gt;</i>		
	All other options are passed to <code>tikzpicture</code> ( <i>env</i> )		
<b>\value</b>	<code>\value{&lt;label&gt;}{&lt;percent&gt;}</code> is used to add a new bubble.		

### 5.2 Examples

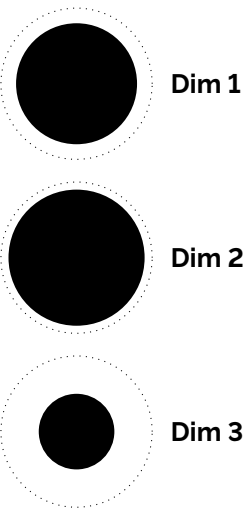

5.2.1 Horizontal

```
% hide borders
\begin{bubblechart}[
  fill-options={draw=none}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
\end{bubblechart}

% Format labels, position below
% fill in red, and
% show maximum disk
\begin{bubblechart}[
  label-cs=textinv,
  label-pos=below,
  draw-options={
    draw=none,
    fill=red!50},
  fill-options={
    fill=red!10,
    draw=none}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
\end{bubblechart}
```

5.2.2 Vertical

```
% Stack bubbles vertically
% show max as a dotted line
% and put labels in bold on the right
\begin{bubblechart}[
  vertical=true,
  label-cs=textbf,
  label-pos=right,
  fill-options={
    draw=black,
    dotted}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
\end{bubblechart}
```

6 Radial chart

6.1 Usage

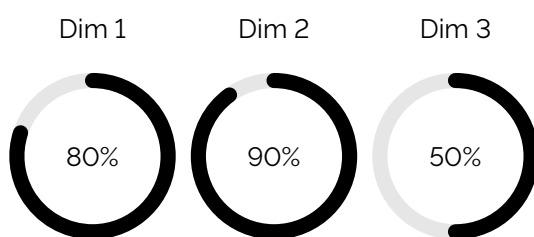

<code>\begin{radialchart}</code>	Environment that hold a radial chart. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma
<code>\end{radialchart}</code>	separated list of keywords and values :
<code>radius</code>	<i>&lt;fp&gt;</i> 1
	Max radius in cm
<code>gap</code>	<i>&lt;fp&gt;</i> 0.4
	Gap between radials in cm

<b>label-cs</b>	$\langle str \rangle$ cs name to format labels with	identity
<b>label-pos</b>	$\langle str \rangle$ Label position relative to radial	above
<b>value-cs</b>	$\langle str \rangle$ cs name to format values with	identity
<b>vertical</b>	$\langle bool \rangle$ Stack radials vertically instead of horizontally	false
<b>draw-options</b>	$\langle prop \rangle$ TikZ options to draw the radial with	black
<b>fill-options</b>	$\langle prop \rangle$ TikZ options to fill/draw the center of the radial with	{fill=none,draw=black!10}
<b>*</b>	$\langle keyval \rangle$ All other options are passed to <code>tikzpicture</code> ( <i>env</i> )	line width=2mm,line cap=round

## 6.2 Examples

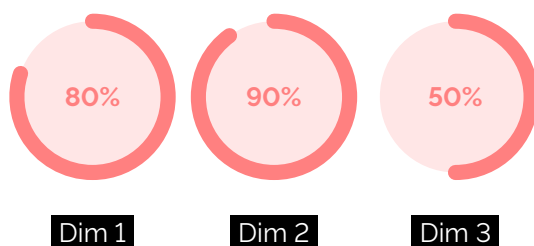

### 6.2.1 Horizontal

```
\begin{radialchart}
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
\end{radialchart}
```

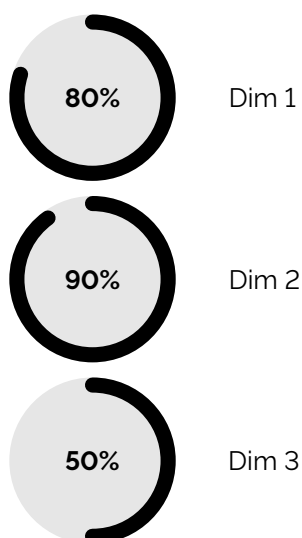

`\redbold` Macro used to format values

```
% bold text in red
\NewDocumentCommand\redbold{m}{\textcolor{red!50}{\textbf{#1}}}
```

```
% Format labels and values,
% position labels below,
% hide ring and show disc
\begin{radialchart}[
  label-cs=textinv,
  label-pos=below,
  value-cs=redbold,
  draw-options={red!50},
  fill-options={
    draw=none,
    fill=red!10}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
\end{radialchart}
```

### 6.2.2 Vertical

```
% Stack radials vertically
% and put labels on the right
\begin{radialchart}[
  vertical=true,
  value-cs=textbf,
  label-pos=right,
  fill-options={
    draw=black!10,
    fill=black!10}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
\end{radialchart}
```

## 7 Index

Numbers in upright shape refer to the *page* where the corresponding entry is described (bold face) resp. occurs.

<b>Options</b>	* (option) .....	<b>2, 3, 5–7, 9</b>	label-pos .....	<b>7, 9</b>
	* .....	<b>2, 3, 5–7, 9</b>	label-radius .....	<b>2</b>

## 8 Changes

### 0.3.0 (2022/07/15)

- add a `radialchart` (*env*) to draw radials
- add a vertical mode to `bubblechart` (*env*) and allow positioning of the label
- swap `fill-options` and `draw-options` for `bubblechart` (*env*) for consistency

### 0.2.0 (2022/07/04)

- define a document class borrowed from `microtype`

### 0.1.0 (2022/07/01)

- Initial version
