

# The l3charts package

Éric BURGHARD

2022/07/01

<https://github.com/eburghar/l3charts>

---

## Abstract

This package defines a few simple TikZ charts that can be drawn using  $\text{\LaTeX}$  environments. This has mainly been developed as an experimentation of `expl3` for checking what  $\text{\LaTeX}$ 3 really brought to facilitate package developpement (expansion control, clist, seq, prop, ...).

## 1 About this documentation

I doubt that  $\text{\LaTeX}$  will have one day a documentation system as powerful as **cargo doc** due to its typeless and syntaxless nature. In my opinion  $\text{\LaTeX}$  literate programming with **docstrip** is just an ugly hack that turns the code and the documentation unmaintainable, and it's probably the component of  $\text{\LaTeX}$  which aged the most.

So I chose to write the documentation separately and borrowed much of the style from the **microtype** package which by the way, pushed the **docstrip** mastery to a *black magic* level.

## 2 Kiviat chart

### 2.1 Usage

The **kiviat chart** or *radar chart* allows to represent one or several set along several dimensions.

<code>\begin{kiviatchart}</code>	Environment that hold a kiviat chart. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list of the following options :	
<code>\end{kiviatchart}</code>		
<b>radius</b>	<i>&lt;dim&gt;</i>	3.5cm
	Maximal diagram radius	
<b>label-radius</b>	<i>&lt;dim&gt;</i>	3.5cm
	Radius to put dimension labels on	
<b>units</b>	<i>&lt;int&gt;</i>	5
	Set the scale of units from 0 to the given number	
<b>*</b>	<i>&lt;keyval&gt;</i>	
	All other options are passed to <b>tikzpicture</b> ( <i>env</i> )	
	A <b>kiviatchart</b> ( <i>env</i> ) should begin with a <b>dims</b> ( <i>env</i> ), followed by one or several <b>set</b> ( <i>env</i> ).	

#### 2.1.1 Dimensions

<code>\begin{dims}</code>	Environment that hold the definition of all dimensions. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list keyword and values :	
<code>\end{dims}</code>		
<b>dim-options</b>	<i>&lt;prop&gt;</i>	{opacity=0.8}
	TikZ options for drawing dimensions axis with	
<b>unit-options</b>	<i>&lt;prop&gt;</i>	{opacity=0.3}
	TikZ options for drawing unit polygons with	
<b>label-options</b>	<i>&lt;prop&gt;</i>	{opacity=0.5,below}
	TikZ options drawing for unit labels	
<b>label-cs</b>	<i>&lt;str&gt;</i>	identity
	name of the cs used to format labels	
<b>unit-cs</b>	<i>&lt;str&gt;</i>	tinytt
	name of the cs used to format unit scale	
<b>\tinytt</b>	Macro used to format unit labels	
<code>\cs_new:Npn \tinytt #1 {\texttt{\tiny #1}}</code>		
<b>\value</b>	<code>\value[&lt;clist&gt;]{&lt;label&gt;}</code> is used to add a dimension to the kiviat chart. [ <i>&lt;clist&gt;</i> ] is passed to TikZ to draw the nodes containing the labels.	

### 2.1.2 Set

`\begin{set}` `set (env)` is used to add a new set to the kiviatchart. Accepts an optional argument [`<clist>`] which is comma separated list keyword and values :

`\end{set}`

**dot-options** `<prop>` `{fill,circle,inner sep=1pt}`

Options for polygon node

\* `<keyval>` `color=black,line width=1.5pt,opacity=1,fill opacity=0.3,fill=gray`

All other options are passed to `\draw cs` which draws the polygon

`\value` `\value{<int>}` is used to add a value to the set.

There must be the same number of `\value` inside `set (env)` and `dims (env)`, and each `\value` corresponds to the dimension in `dims (env)` at the same index.

## 2.2 Examples

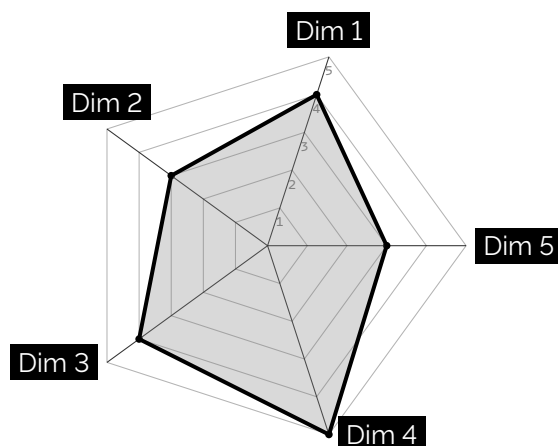

### 2.2.1 Simple

Use `label-cs` to call `\textinv` to format the labels.

`\textinv` Macro used to format labels

```
% put a white text on a black background
\NewDocumentCommand\textinv{m}{%
  \colorbox{black}{\textcolor{white}{#1}}}
```

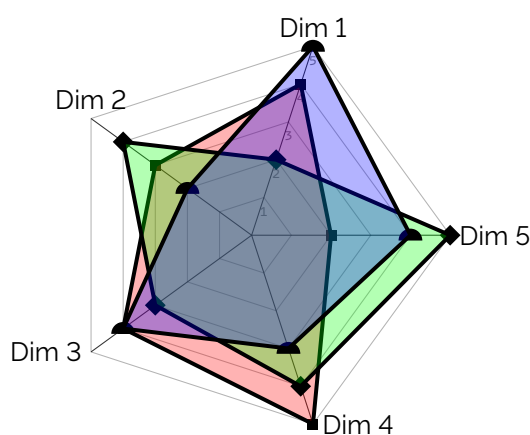

```
% the scale option is passed to tikzpicture
\begin{kiviatchart}[scale=0.75]
  % we define all the dimentions of the charts, and specify the placement
  % of labels relatively to the nodes
  \begin{dims}[label-cs=textinv]
    \value[above]{Dim 1}
    \value[above]{Dim 2}
    \value[left]{Dim 3}
    \value[right]{Dim 4}
    \value[right]{Dim 5}
  \end{dims}
  % Then we can add one or several sets. Each value correspond to
  % the dimension at the same index in dims environment
  \begin{set}
    \value{4}
    \value{3}
    \value{4}
    \value{5}
    \value{3}
  \end{set}
\end{kiviatchart}
```

### 2.2.2 Multi-set

Each set set its own color and point shape.

```
% the scale option is passed to tikzpicture
\begin{kiviatchart}[scale=0.75]
  \begin{dims}
    \value[above]{Dim 1}
    \value[above]{Dim 2}
    \value[left]{Dim 3}
    \value[right]{Dim 4}
    \value[right]{Dim 5}
  \end{dims}
  % fill this set in red with rectangle dots
  \begin{set}[fill=red,dot-options={fill,rectangle,inner sep=2pt}]
    \value{4}
    \value{3}
    \value{4}
    \value{5}
    \value{2}
  \end{set}
  % fill this set in green with diamond dots
  \begin{set}[fill=green,dot-options={fill,diamond,inner sep=2pt}]
    \value{2}
    \value{4}
    \value{3}
    \value{4}
    \value{5}
  \end{set}
  % fill this set in blue with semicircle dots
  \begin{set}[fill=blue,dot-options={fill,semicircle,inner sep=2pt}]
    \value{5}
    \value{2}
    \value{4}
    \value{3}
    \value{4}
  \end{set}
\end{kiviatchart}
```

## 2.3 To do

At the moment the environments are not user friendly. We could provide basic sanity checks, with error messages when theses rules are violated :

- one and only one `dims` (*env*) declared before any `set` (*env*)
- `set` (*env*) has the same number of `\value` than `dims` (*env*)
- `\value` in `set` (*env*) is between 0 and units

## 3 Ball chart

### 3.1 Usage

<code>\begin{ballchart}</code>	Environment that hold a ball chart. Accepts an optional argument [ <code>\langle clist \rangle</code> ] which is comma separated list keyword and values :		
<code>\end{ballchart}</code>			
<b>n</b>	<code>\langle int \rangle</code>	The number of circles ( <b>required</b> )	
<b>v-sep</b>	<code>\langle fp \rangle</code>	Vertical separator in cm	0.1
<b>h-sep</b>	<code>\langle fp \rangle</code>	Horizontal separator (circle) in cm	0.5
<b>radius</b>	<code>\langle fp \rangle</code>	radius Radius of the circles in cm	0.25
<b>gap</b>	<code>\langle fp \rangle</code>	Gap between circle in cm	0.05
<b>label-cs</b>	<code>\langle str \rangle</code>	cs name to format labels	identity
<b>fill-options</b>	<code>\langle prop \rangle</code>	TikZOptions to fill balls with	{fill=black}
<b>draw-options</b>	<code>\langle prop \rangle</code>	TikZ options to draw balls with	{draw=black!30}
<b>label-options</b>	<code>\langle prop \rangle</code>	TikZ options for dimensions axis	{left}
<b>*</b>	<code>\langle keyval \rangle</code>	All other options are passed to <code>tikzpicture</code> ( <code>env</code> )	
<b>\value</b>	<code>\value{\langle label \rangle}{\langle percent \rangle}</code> is used to add a new bar.		

### 3.2 Examples

#### 3.2.1 Simple

```
% draw 5 circles bar hiding the circles
\begin{ballchart}[n=5, draw-options={draw=none}]
  \value{Dim 1}{95}
  \value{Dim 2}{80}
  \value{Dim 3}{80}
  \value{Dim 4}{20}
\end{ballchart}
```

Dim 1 ●●●●●

Dim 2 ●●●●

Dim 3 ●●●●

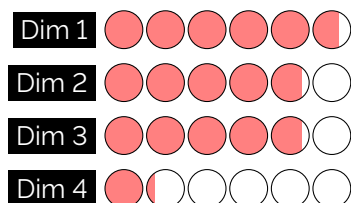

Dim 4 ●

#### 3.2.2 Delimited

Format labels, show circles, change color, add more circles.

```
% format the labels, fill in red and shows circles
\begin{ballchart}[n=6, label-cs=textinv, v-sep=0.2, fill-options={fill=red!50},
  draw-options={draw=black}]
```

```
\value{Dim 1}{95}
\value{Dim 2}{80}
\value{Dim 3}{80}
\value{Dim 4}{20}
\end{ballchart}
```

## 4 Bar chart

### 4.1 Usage

`\begin{barchart}` Environment that hold a bar chart. Accepts an optional argument [`\langle clist \rangle`] which is comma separated list of the following options :

<code>\end{barchart}</code>		
<code>width</code>	<code>\langle fp \rangle</code> maximum width ( <b>required</b> ) in cm	
<code>height</code>	<code>\langle fp \rangle</code> bar height in cm	0.35
<code>gap</code>	<code>\langle fp \rangle</code> Gap in cm	0.25
<code>fill-options</code>	<code>\langle prop \rangle</code> TikZ option to fill the bar with	<code>{fill=black}</code>
<code>draw-options</code>	<code>\langle prop \rangle</code> TikZ option to draw the bar with	<code>{draw=black!20}</code>
<code>label-cs</code>	<code>\langle prop \rangle</code> cs name to format labels	<code>identity</code>
<code>*</code>	<code>\langle keyval \rangle</code> All other options are passed to <code>tikzpicture (env)</code>	
<code>\value</code>	<code>\value{\langle label \rangle}{\langle percent \rangle}</code> is used to add a new bar.	

### 4.2 Examples

#### 4.2.1 Simple

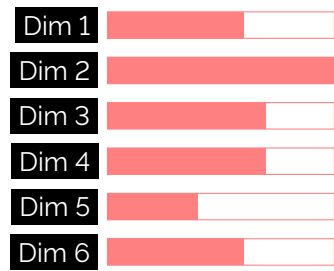

```
% hide borders
\begin{barchart}[draw-options={draw=none}]
\value{Dim 1}{60}
\value{Dim 2}{100}
\value{Dim 3}{70}
\value{Dim 4}{70}
\value{Dim 5}{40}
\value{Dim 6}{60}
\end{barchart}
```

4.2.2 Delimited

Change color, show as a gauge.

```
% draw 3cm wide bars, format labels, fill in red and show borders
\begin{barchart}[width=3, label-cs=textinv, fill-options={fill=red!50},
  draw-options={draw=red!50}]
  \value{Dim 1}{60}
  \value{Dim 2}{100}
  \value{Dim 3}{70}
  \value{Dim 4}{70}
  \value{Dim 5}{40}
  \value{Dim 6}{60}
\end{barchart}
```

5 Bubble chart

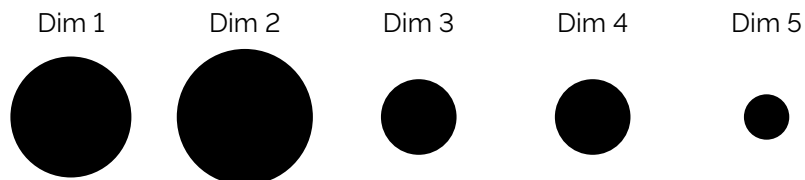

5.1 Usage

<code>\begin{bubblechart}</code>	Environment that hold a bubble chart. Accepts an optional argument [ <i>&lt;clist&gt;</i> ] which is comma separated list of the following options :		
<code>\end{bubblechart}</code>			
<code>radius</code>	<i>&lt;fp&gt;</i>	1	Max radius in cm
<code>gap</code>	<i>&lt;fp&gt;</i>	0.3	Gap between bubbles in cm
<code>fill-options</code>	<i>&lt;prop&gt;</i>	{fill=black}	TikZ options to fill bubble with
<code>draw-options</code>	<i>&lt;prop&gt;</i>	{draw=black!30}	TikZ options to draw bubble with
<code>label-cs</code>	<i>&lt;str&gt;</i>	identity	cs name to format labels
<code>*</code>	<i>&lt;keyval&gt;</i>	All other options are passed to <code>tikzpicture</code> ( <i>env</i> )	
<code>\value</code>	<code>\value{&lt;label&gt;}{&lt;percent&gt;}</code> is used to add a new bubble.		

## 5.2 Examples

### 5.2.1 Simple

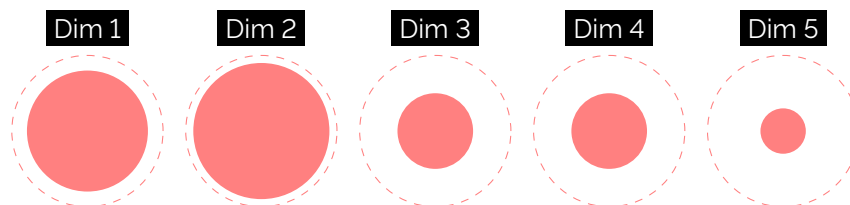

```
% hide borders
\begin{bubblechart}[draw-options={draw=none}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
  \value{Dim 4}{50}
  \value{Dim 5}{30}
\end{bubblechart}
```

### 5.2.2 Delimited

Format labels, change colors, show absolute limit (100%)

```
% format labels, fill in red, and show maximum dashed
\begin{bubblechart}[label-cs=textinv, fill-options={fill=red!50},
  draw-options={draw=red!50,dashed}]
  \value{Dim 1}{80}
  \value{Dim 2}{90}
  \value{Dim 3}{50}
  \value{Dim 4}{50}
  \value{Dim 5}{30}
\end{bubblechart}
```

## 6 Index

Numbers in upright shape refer to the *page* where the corresponding entry is described (bold face) resp. occurs.
